What is a continent?

A continent is a massive area of land that is separated from others by water or other natural features. There are seven continents on Earth and together they cover one third of the world, with the oceans covering the other two thirds.

Can we compare countries by their climate?

climate

The weather found in a certain place over a long period of time is known as the climate. An area's climate determines what kinds of plants can grow and what kinds of animals can survive there.

People use information about climates to decide which crops to plant and to choose the best season for traveling to vacation spots.

How can we compare these places ?

Asia

Australia

Africa

New York

Dover

Antartica

Rio de Janeiro

In year 1 we learnt to understand geographical similarities and differences through studying the human and physical geography of a small area of the United Kingdom, and of a small area in a contrasting non-European country using simple maps and keys.

Can you name the seven continents and the five oceans?
